KAZEEM JIMOH

PROFESSIONAL SUMMARY:

Computer Engineering graduate with a strong technical foundation spanning IT support, software development, networking, and embedded systems. Experienced in frontend web development and UI/UX design, with growing specialization in cloud computing and DevOps practices. Demonstrated ability to troubleshoot systems, build user-focused digital solutions, and adapt quickly across technical environments. Highly motivated, detail-oriented, and eager to grow within structured graduate and entry-level roles.

PROFESSIONAL EXPERIENCE:

Frontend Web Developer (NYSC)
Aorthar Agency — Lagos, Nigeria
Dec 2023 – Oct 2024

- Developed mobile-first, responsive user interfaces using React and TailwindCSS.
- Integrated RESTful APIs to enable secure and reliable data exchange.
- Refactored legacy codebases, improving performance, maintainability, and load times.
- Collaborated with team members using GitHub for version control and task tracking.
- Applied responsive design best practices to ensure cross-device compatibility.

Product Design Facilitator
3MTT Program — Ibadan, Nigeria
Aug 2024 – Nov 2024

- Facilitated hands-on UI/UX design training using Figma and InVision.
- Mentored participants through end-to-end design workflows, from ideation to high-fidelity prototypes.
- Applied frontend development knowledge to ensure designs were technically feasible and easily translatable into code during training sessions.
- Designed structured feedback and iteration frameworks that improved learning outcomes and participant satisfaction.

React Developer (Freelance)
Remote
Sep 2025 – Dec 2025

- Built and maintained scalable frontend applications using React, TypeScript, and TailwindCSS.
- Implemented component-based architectures to improve code reuse and maintainability.
- Translated UI/UX designs into functional, performant interfaces.
- Worked independently to deliver solutions aligned with client requirements.

Webflow Developer (Freelance Project)
Remote — 2025

- Integrated custom JavaScript functionality into Webflow-based websites.
- Configured payment integrations and optimized form workflows.
- Extended Webflow layouts using custom CSS to enhance animations and responsiveness.
- Improved overall user experience and content management workflows.

Embedded Systems Intern
Mustech Laboratories — Ilorin, Nigeria
Dec 2021 – Aug 2022

- Designed IoT-enabled systems using Arduino and ESP32 microcontrollers.
- Conducted firmware testing and hardware debugging to reduce system errors.
- Built embedded prototypes for automation and monitoring use cases.
- Collaborated with senior engineers on real-world embedded solutions.

IT Support Intern
AIT Links — Ilorin, Nigeria
Jun 2020 – Sep 2020

- Provided technical support to end users across Windows and Linux environments.
- Installed, configured, and maintained operating systems and application software.
- Assembled and optimized computer hardware systems for small business environments.
- Resolved hardware and software issues within SLA targets.

TECHNICAL PROJECTS:

Speed Radar System

- Designed an IoT-enabled speed monitoring solution using microcontrollers.
- Built a React-based web interface for real-time data visualization and violation logging.

Catalogue Management Platform

- Developed a web-based platform using Next.js, TypeScript, and TailwindCSS.
- Implemented full CRUD functionality to manage digital collections efficiently.
- Improved content handling efficiency for users.

Terraform-Based AWS Infrastructure Deployment

- Provisioned AWS cloud infrastructure using Terraform, automating the creation of compute resources and security configurations. Applied Infrastructure-as-Code principles using terraform init, plan, and apply.

High-Availability Web Infrastructure (Terraform)

- Designed and deployed a high-availability AWS architecture using Terraform, configuring networking components and compute resources to simulate scalable production infrastructure.

Linux Server Hardening Lab

- Configured and secured a Linux server environment by implementing SSH hardening, firewall rules (UFW), and user access control to demonstrate system administration and security best practices.

Next.js Application Deployment on Linux Server

- Deployed a Next.js web application on a Linux server using Nginx, configuring the server environment and managing application build and hosting processes.

CERTIFICATIONS & TRAINING:

Cloud Security + DevOps — Digital Witch (Ongoing)
Python for Data Structures & Algorithms — Coursera

EDUCATION

University of Ilorin

Bachelor of Engineering (B.Eng) – Computer Engineering
Graduated: October 2023
CGPA: 3.46 / 5.0

SKILLS

Programming & Development

- HTML, CSS, JavaScript, TypeScript
- React, Next.js
- Python (Data Structure & Algorithm)

Systems & IT Support

- Windows and Linux administration (basic)
- System troubleshooting and diagnostics
- Software installation and configuration

Networking & Infrastructure

- IP addressing and basic routing concepts
- Network simulation with Cisco Packet Tracer
- Troubleshooting connectivity issues

Cloud & DevOps (Foundational)

- AWS and Microsoft Azure fundamentals
- Cloud security concepts and best practices
- DevOps principles (CI/CD concepts, automation basics)

Design & Product Tools

- Figma, Adobe XD, InVision, Framer
- UI/UX design principles and prototyping

Version Control & Collaboration

- Git, GitHub
- Agile/Scrum exposure
