KAZEEM JIMOH

PROFESSIONAL SUMMARY:

Cloud & DevOps-focused Computer Engineering graduate with hands-on experience deploying and managing AWS infrastructure using Terraform and Linux. Skilled in Infrastructure-as-Code, server hardening, and web application deployment, with a background in software development and system support. Proven ability to build scalable, secure systems and adapt quickly across technical environments.

PROFESSIONAL EXPERIENCE:

Frontend Web Developer (NYSC)
Aorthar Agency — Lagos, Nigeria
Dec 2023 – Oct 2024

- Developed and maintained web applications using React within collaborative Git-based workflows
- Integrated APIs and improved application performance through code optimization
- Worked in Linux-based environments and followed structured deployment practices

React Developer (Freelance)
Remote
Sep 2025 – Dec 2025

- Built scalable frontend applications using React and TypeScript
- Implemented reusable component-based architectures for maintainability
- Delivered client-focused solutions independently within defined timelines

IT Support Intern
AIT Links — Ilorin, Nigeria
Jun 2020 – Sep 2020

- Provided technical support across Windows and Linux systems
- Installed, configured, and maintained software and hardware systems
- Troubleshot system and network issues to maintain operational efficiency

ADDITIONAL EXPERIENCE

Product Design Facilitator
3MTT Program — Ibadan, Nigeria

- Delivered training on UI/UX design principles and tools
- Guided participants through structured design workflows

Embedded Systems Intern
Mustech Laboratories — Ilorin, Nigeria

- Built IoT-based systems using microcontrollers (Arduino, ESP32)
- Conducted hardware testing and debugging

TECHNICAL PROJECTS:

High Availability Web Infrastructure (Terraform)
Designed and deployed a highly available AWS architecture using Terraform, implementing load balancing and scalable compute resources to simulate production-grade systems.

Terraform AWS Infrastructure Deployment
Provisioned AWS infrastructure using Terraform, automating EC2 instances and security group configurations. Applied Infrastructure-as-Code workflows (init, plan, apply) for consistent deployments.

Linux Server Hardening
Secured a Linux server by implementing SSH key authentication, disabling root login, configuring UFW firewall rules, and enforcing user access control policies.

Next.js Application Deployment on Linux Server
Deployed a Next.js application on an EC2 instance using Nginx as a reverse proxy, configuring server environment, application build, and hosting setup.

CERTIFICATIONS & TRAINING:

Cloud Security + DevOps — Digital Witch (Ongoing)
Python for Data Structures & Algorithms — Coursera

EDUCATION

University of Ilorin
Bachelor of Engineering (B.Eng) – Computer Engineering
Graduated: October 2023
CGPA: 3.46 / 5.0

SKILLS

Cloud & DevOps
Terraform, AWS (EC2, VPC, Security Groups, EFS), Infrastructure-as-Code, Nginx

Systems Administration
Linux server management, SSH, UFW firewall, system hardening, troubleshooting

Programming
JavaScript, TypeScript, Python

Development
React, Next.js

Networking
IP addressing, routing fundamentals, Packet Tracer

Tools
Git, GitHub, Git Bash
